

FOR IMMEDIATE RELEASE

Spotter Global, Inc.

March 22, 2022

SpotterRF has Grown into Spotter Global.

Rapid expansion has necessitated a new name for SpotterRF which aligns with expanded goals and offerings of the company.

OREM, Utah, March 22, 2022. SpotterRF, commonly known as Spotter, has grown into a world-wide company in record time. During that growth, the company has addressed an increasingly global audience in its efforts to fulfill its mission of “Preventing harm and protecting all people”. Combined with its expanded product line and incorporation of other technologies it has become Spotter Global.

Since its founding, Spotter Global has primarily focused on radio frequency (RF) radar hardware solutions. Over the past decade, Spotter Global has added a tremendous amount of hardware and software technologies that include advanced warning and response through automated alarms, GPS location of potential intruders, and cutting-edge Artificial Intelligence (AI) capabilities. The company also partners with other large third-party manufacturers of cameras and security equipment to enable deep integration of their products for a total security solution. Brad Solomon, Vice President of Global Business Development at Spotter Global, said, “Better solutions exist when radar and AI software are paired with other technologies like a PTZ camera, fence sensor, or RF drone sniffer.”

In conjunction with this growth, Spotter Global is providing additional site optimization tools this year that focus on alarm control and enterprise system status monitoring to minimize downtime. Spotter Global is also launching new radar hardware and software versions in 2022 that will increase reliability and durability beyond any current market standard in the radar security industry in the world. This unprecedented reliability will be backed up by a guaranteed extended length warranty for all security systems.

“Spotter Global is committed to providing our customers with the highest quality security and maintenance-free solutions to protect their critical infrastructure and property, anywhere on the globe,” asserts Spotter Global CEO Frank Christophersen.

Spotter Global History

SpotterRF, now Spotter Global, was founded in 2009 to develop and manufacture compact surveillance radar to protect Special Forces deployed around the world from harm. In 2013, SpotterRF stepped in to fill the need for an innovative and user-friendly commercial security radar to protect critical infrastructure. Since that time, Spotter Global has expanded its offering to include models and form factors that cover areas ranging from one acre to 380 acres and verticals that go far beyond critical infrastructure. This allows the company to ensure its mission of Harm Prevented.

Spotter Global innovates, designs, manufactures, and supports ground and aerial Compact Surveillance Radar in the United States at our HQ in Orem, UT. Additionally, our software is built from the ground-up by dedicated personnel that ensures the highest quality and concern for customer security. We are proud to operate, manufacture, design, and assemble our products here in the USA.
